Sift Science
San Francisco, CA, US

Dear Hiring Manager,

I am writing to express my strong interest in your Software Engineer Intern position at Sift Science, San Francisco, CA. I came across the job description on LinkedIn, and was delighted to find that my academic and professional accomplishments meet the necessary requirements. I am seeking a challenging but rewarding internship, which is why I was drawn to this exciting opportunity.

Throughout my time at San Jose State University pursuing my Masters degree in Software Engineering, I have been given the opportunity to put my technical and leadership skills into practice through many group projects each semester. In the past semester, I worked on two major projects. First, an android application that would help citizens report common incidents to concerned authorities with minimal effort. Second, a RESTful, multi-tenant, fault tolerant and cloud based web application for Starbucks order processing system. While working on these projects I have acquired skills in **cloud computing, android** and **REST framework**.

I have completed AWS Solutions Architect certification in July, 2017. I am currently working on developing a Dropbox prototype using ReactJs and NodeJs. I am also expanding my technical skill set through courses like **Enterprise Distributed Systems, Software Systems Engineering** and **Big Data**.

As part of my **4+ years of professional work experience**, I have been responsible for **full life cycle development** of finance and insurance applications. I was repeatedly recognized for developing innovative solutions for globally deployed software and systems. Known for excellent technical skills, I have participated in developing demos for potential clients.

Furthermore, I am a **team player** who has **good communication** and **leadership** abilities. My enclosed resume contains further details about my education and programming background.

I would be delighted to be able to contribute to the success of your internship program and your company. I appreciate your time and attention to my information, and I look forward to hear from you.

Sincerely,
Dishant Kimtani
